Digital Industries Software President and CEO Joins Board of Siemens Government Technologies

WASHINGTON – Siemens Government Technologies (SGT), Inc. today announced that Tony Hemmelgarn, president and Chief Executive Officer of Siemens Digital Industries Software, has joined its board of directors.

An experienced software industry executive, Hemmelgarn has been at Siemens since 2001 and has helped establish Siemens as the enabler of choice for connecting the digital and physical worlds. Through its [Xcelerator™ software portfolio](#), Siemens is helping companies of all sizes create and leverage digital twins that can provide new insights, opportunities and levels of automation to drive innovation.

Through Siemens' wholly-owned but separately incorporated SGT business, a special security agreement empowers direct application of Siemens' software for cleared U.S. government work, accelerating transformative change and "speed-to-need" in both design and sustainment of essential systems trusted to perform when they're needed the most. From the modeling and design of the nation's most advanced military systems – including the Virginia- and Columbia-class submarines, to aircraft including the F-35 Joint Strike Fighter, V-22 Osprey and the F/A-18 Hornet, Siemens' software is trusted and relied on by the aerospace and defense community.

"With the increasingly complex interdependency of software and systems trusted for vital government missions, we are excited to have Tony bring his leadership, experience and board insights to SGT," said Anne Altman, IBM's long-time federal business leader and senior executive and SGT board chairman. "Government leaders working at the crossroads of sustainment for legacy systems and rapid acceleration of new systems and production methodologies require an advanced software-driven digital value chain solution that Siemens is uniquely qualified to offer."

Joining Hemmelgarn on the board of directors is Anne Altman, board chair; Bob Coutts, retired Lockheed Martin executive vice president; Lieutenant General John Sylvester, U.S. Army retired; and Axel Meier, CFO for the Smart Infrastructure operating company of Siemens AG.

About Siemens Government Technologies

[Siemens Government Technologies](#) is a leading integrator of Siemens' innovative products, technologies, software and services to address U.S. government customer imperatives in the areas of energy generation and resiliency, smart infrastructure modernization, and software-driven optimization of maintenance, sustainment and production activities across government and its supplier base.
